**DO NOT CUT THE STRAPS**

## 4 INSERTING CURTAIN INTO GUIDE RAILS

**YOU CAN NOW CUT THE STRAPS**

## SETTING THE SPRING TENSION

## 5 SETTING LOCKING BARS

Drill holes for locking bars

## AFTER INSTALLATION MAINTENANCE

- ALL DOORS**
- Do not apply grease or oil to the door guides.
  - Periodic wiping of the inside of the guides with methylated spirits is beneficial and polishing (car polish) of the inside surfaces assists smooth door operation.
  - Powdered graphite periodically applied to the lock key-way is recommended and necessary, light lubrication of the locking bar retainers is suggested.
  - It is advisable, particularly in corrosive areas, to wash your door, including the top, the door roll, with a cloth and water as regularly as you wash your car. This will maintain the surface free from corrosive deposits, giving your door longer life and more lasting appearance. (One tablespoon paraffin to a bucket of water)

**GALVANISED DOORS**  
Painting: Refer to your local paint specialist for expert advice.

**CHROMODEK DOORS**  
Touch up paint. Only Chromodek paint must be used for touch-up of these doors. This paint can be obtained from your local paint dealer.
